1. Description

BOOX is a lightweight second hand book exchange system framwork. Our github url (Public after DDL):

https://github.com/CrabAss/COMP3421-Proj

- 3. Prerequisites
  - a. Server
    - i. Nodejs setup (Remember the path of index page)
    - ii. MongoDB setup
  - b. Packages Dependencies (Nodejs) install with 'npm'
    - i. bcrypt
    - ii. body-parser
    - iii. connect-mongo
    - iv. cookie-parser
    - v. debug
    - vi. express
    - vii. express-session
    - viii. http-errors
    - ix. mongoose
    - x. morgan
    - xi. pug
    - xii. pug-cli
- 4. Installing
  - a. Move the "souce code.zip" to 'www' folder (root folder of nodejs)
  - b. Unzip it to current folder path '..../www/'
  - c. Create MongoDB database using following scheme

Web (Database)

- i. book (Collection)
- ii. favorite (Collection)
- iii. tags (Collection)
- iv. transaction (Collection)
- v. userAccount (Collection)
- vi. userAddress (Collection)
- d. Start Nodejs and MongoDB Server
- e. Finish
- 5. Run and test

Go to your web server address to test the function.

### 6. Build With

- a. Nodejs Backend server language
- b. Pug, CSS, JS Frontend language
- c. Express The web framework used
- d. MongoDB Backend database
